

Product Information

FlexTape

FlexTape is a transparent polyester film, coated with an acylate adhesive on an embossed polypropylene carrier with medium adhesion properties.

The specially prepared adhesive is able to transfer heat-sealable scripts and motifs of "Tatoo", "Tatoo Pearl", "Tatoo Subliblock" and other flex-films onto textiles, without any problems. FlexTape can also be used to transfer self-adhesive films such as "CoolFlex" and „CoolPrint“.

Care should be taken for the ink to be dry, when transferring printed films, as otherwise the motif can be smudged.

The adhesive has excellent properties with regard temperature-, ageing and UV resistance. It can be removed completely without trace even after a longer adhesion period.

The embossed polypropylene carrier is especially useful, as prepared motifs can be stored and supplied easily and due to the embossed structure of the carrier, the motifs can be removed without any problems ahead of being ironed on.

Carrier

Polyester film,
transparent

Adhesive

Acylate

Thickness

0.100 mm +/- 5 %

Adhesion Force

1.3 N/cm +/- 10 %
After 20 min, stainless steel

Tensile Strength

A minimum of 100 N/cm

Elongation at brake

170 % +/- 10 %

Liner

Embossed PP-Foil, white

Packaging

25 cm x 25 m
25 cm x 50 m
50 cm x 25 m
50 cm x 50 m

Further sizes upon
request

Store in a cool and dry place; protect against the influence of light when stored. We recommend not to exceed a storage period of 24 months. The technical specifications rest on extensive tests and technical research. Due to the variety of possible influences during refinement, and use, the specifications should be viewed as reference values. We recommend a suitability test on the original material. A legally binding warranty of specific characteristics cannot be derived from our specifications.
